Bolivian Household Energy Storage Standards

What type of energy system does Bolivia use?
Similar to the country's total energy system,the power sector relies heavily on natural gas(AEtN,2016). The electricity network in Bolivia is broken into two classifications: the National Interconnected System (SIN) and the Isolated Systems (SAs).

What are the heating demands in Bolivia?
Residential heating demands in Bolivia are quite low,though they do notably increase throughout the transition as access to energy services increase,except for biomass for cooking,which is phased out by the end of the transition. Heating demands are projected to increase from 52 TWh in 2015 to 205 TWh in 2050. Fig. 12.

What are the policy guidelines for the energy sector in Bolivia?
The Bolivian government has established the following policy guidelines for the energy sector: energy sovereignty, energy security, energy universalization, energy efficiency, industrialization, energy integration, and strengthening of the energy sector (MHE, 2014).

What will be Bolivia's energy transition?
This transition for Bolivia would be driven by solar PVbased electricity and high electrification across all energy sectors.

Does Bolivia have a long-term energy plan?
As previously mentioned,the Bolivian government does not provide any long-term energy planning study,however,the UNFCC (2015b) states that RE will compose 81% of electricity generation by 2030. Bolivia's scenario for 2027 according to MHE (2009) states that biomass sources will comprise 8% of total final energy demand.

Will Electric based heating drive the transition in Bolivia?
Heating demand in Bolivia transitions from a system dominated by natural gas and biomass to a largely electrified heating sector. Because of the low cost of renewable electricity,electric based heating will drive the transitionfor Bolivia's heat sector. Fig. 13.
