

What is a residual current circuit breaker (RCCB)?

Residual Current Circuit Breaker (RCCB) is an electrical safety device that quickly disconnects a circuit that leaks current to earth. It is designed to protect equipment and reduce the risk of serious injury from sustained electrical shock.

What is a RCCB & how does it work?

The RCCB detects this current and breaks the circuit to prevent electrical accidents. RCCBs are commonly used in homes, offices and other buildings where electrical safety is a concern. They are usually installed on distribution boards and can protect multiple circuits at the same time.

What is a RCCB tripping circuit?

They are usually installed on distribution boards and can protect multiple circuits at the same time. RCCBs have different sensitivity levels, which determine the amount of residual current that triggers their tripping. In general, RCCBs have a sensitivity range of 10-300 mA.
